Converged Network Solutions Rolls Out Service Offerings Critical to Major Telecom OEM's and Service Providers

CNS is positioned to provide critical support in the development and implementation of convergence and IMS related services

DALLAS – June 1, 2005 – Converged Network Solutions (CNS) (<http://www.convergedns.com>), a convergence and IMS focused professional services company, has officially announced the availability of five uniquely designed service offerings focused on helping telecom service providers and OEM's address the growing demand for IMS related support.

“CNS has seen a tremendous increase in the need for support with regard to IMS related issues at the service provider and OEM levels in the telecom value chain,” said Brian White, Chief Marketing Officer at CNS. “We have now officially begun to offer our specialized convergence/IMS related services, which have been architected to help relieve pressure from our clients in 5 critical areas. Our offering includes strategy development, technology evaluation, product customization, installation and integration and interoperability testing.”

The service offerings are delivered by a highly skilled group of professionals with deep technical and industry knowledge. In addition, CNS personnel are also chosen for their capability to work hand-in-hand with client organizations to deliver quality solutions in a timely manner. “The types of expertise needed to deliver these services at a high level are state-of-the-art,” says Matthew Bowers, President of CNS, “We have found that customers want us to come in and work closely with internal personnel and help promote the transfer of valuable skills.”

#####

About Converged Network Solutions – CNS is setting the benchmark for quality, delivering advanced professional services to the communications industry. Our team brings together hundreds of person-years of experience from such firms as SBC, Verizon, Marconi Wireless, Ericsson, Motorola, Raytheon, Texas Instruments, and Mobilestar. CNS personnel planned, built, tested, deployed and managed some of the most advanced wireline and wireless networks and equipment in the world.
